2. Citations and explanations (Rule 70.7)

This report is based on new claims filed after the Written Opinion.

The claimed invention

The claimed invention relates to the problem concerning preventing that an improper sterile product is connected to medical technical equipment.

The problem is solved by arranging a fixed identification tag on the sterile product. The tag is read by a sensor on the equipment without touching the sterile product and a decision is made whether the sterile product is suitable to use or not.

Prior art

In the International Search Report the following documents were cited:

D1: DE19822751

D2: US5591344

D3: WO0174421

D4: WO9305829

D5: US5131823

D6: EP1101506

D7: US5078683

D3 describes an angiographic injector subassembly. In D3 a bar code is placed on a sterile syringe and is read by a reader on the syringe holder. The bar code information is processed and the system is blocked and information is presented to the user if not an appropriate bar code was read. This system prevents the use of incompatible syringes. (See page 14, line 20-28.)

D5 describes a device for joining a connection piece to a peristaltic pump. (See figure 1-3 and abstract.)

INTERNATIONAL PRELIMINATE REPORT ON PATENTABILITY

Supplemental Box

In case the space in any of the preceding boxes is not sufficient. Continuation of: Box V.

D6 describes a medical gas delivering system. In D6 a sterile filter is attached to the gas delivering equipment. The sterile filter comprises a machine readable identification element, for example a bar code. When the filter is connected to the equipment the bar code is placed in front of reading unit that identifies the filter. Based in this identification an evaluation process starts. An evaluation unit comprises a memory, in which information on filters is stored. If a filter has been used before the memory contains information about this and the system then blocks the gas supply and alerts the user. If the filter has not been used before the system will start delivering gas. (See paragraphs 0008-0009 and 0016.)

Documents D1, D2, D4 and D7 represent the prior art. The claimed invention is not considered to be anticipated by these documents.

Statement of reason

The cited documents represent the general state of the art.

The invention defined in claims 1-7 is not disclosed by any of these documents.

The cited prior art does not give any indication that would lead a person skilled in the art to the claimed identification device. Therefore, the claimed invention is not obvious to a person skilled in the art.

Accordingly, the invention defined in claims 1-7 is novel and is considered to involve an inventive step. The invention is industrially applicable.
